Alliance Tooling Achieves Prestigious ISO 14001 Accreditation

Leading Leicestershire-based injection mould toolmaker, Alliance Tooling, is proud to announce that it has been granted the internationally recognised ISO 14001 certification: marking a significant milestone in its commitment to sustainability and the continuous improvement of its environmental management practices.

ISO 14001 is a globally acknowledged standard that outlines the parameters for an effective environmental management system. This certification reflects an organisation's dedication to managing its environmental responsibilities in a strategic and transparent manner.

The acquisition of the ISO 14001 certification underlines Alliance Tooling's proactive approach to environmental stewardship and affirms the company's promise to decrease its ecological footprint. By implementing the rigorous standards required for the certification, Alliance Tooling has shown its ability to measure and manage its environmental impact, ensuring continuous improvements in sustainability and operational efficiency.

Alliance Tooling's journey to achieving ISO 14001 accreditation has involved an assessment and refinement of its processes, ensuring that environmental considerations are integrated at the heart of its business operations.

The company is delighted to announce, following successful audits in November 2023, that Alliance Tooling is now fully ISO 14001 compliant.

Alliance's recent investments in state-of-the-art machinery, also reflect its commitment to not just maintaining but elevating industry standards.

The highly skilled engineers at Alliance Tooling, all apprentice-trained, have embraced the ethos of the ISO 14001 standard, further cementing the company's reputation as a trusted partner in the toolmaking sector. Customers of Alliance Tooling can continue to rely on the quality and reliability of its injection moulds while gaining the added assurance that their projects align with the highest environmental standards.

Alliance Tooling's Technical Director, Chris Rossell, expressed pride in the achievement, stating:

"Earning the ISO 14001 certification is a testament to our team's hard work and our commitment to environmental excellence. We are not only ensuring that our processes are more sustainable, but we are also providing our clients with the peace of mind that they are partnering with a forward-thinking and environmentally responsible company."

With its fully equipped UK toolroom based in Leicestershire and production capabilities extending to the Far East, Alliance Tooling's ISO 14001 accreditation promises to fortify its market position, demonstrating that quality and environmental responsibility are not mutually exclusive but are indeed complementary hallmarks of a modern, client-focused company.

For additional information about Alliance Tooling and its environmentally conscious toolmaking services, please contact Chris Rossell on [+44\(0\)1162 750 584](tel:+44(0)1162750584) or info@alliancetooling.co.uk.
