PCM Automation Welcomes New Talent to Foster Continued Growth

PCM Automation, the leading specialist in the automation of injection moulding processes, is delighted to announce the addition of three key team members: Nathan Lawrence-Monck and Francis Sherman as CAD Engineers, and Jack Gavigan as an Apprentice Technical Engineer.

Founded in 2009 by Peter Crossley, PCM Automation has grown from humble beginnings and quickly established itself as a front-runner in providing comprehensive automation solutions. In this time the company has grown substantially, now occupying an impressive 7700 sq. ft. building at Trinity Business Park in Wakefield. This expansion underscores PCM Automation's commitment to advancing its business plan and enhancing its offerings.

Roger Ewers, Sales Director, shares his excitement about the new team members: *"We are delighted to welcome Nathan, Francis, and Jack aboard. Their expertise in CAD engineering and technical engineering is crucial as we continue to innovate and push the boundaries in delivering advanced automation cells for injection moulding."*

"This expansion is not merely a growth in numbers; it reflects our dedication to fulfilling the diverse requirements of our clients across the UK, offering bespoke solutions that cater to the unique needs of injection moulders."

This latest development marks a significant phase in PCM Automation's steady growth, highlighted by key milestones such as the acquisition of Delta Engineering and the broadening of its workforce and manufacturing capacities. With these new additions, the company is superbly positioned to continue its trajectory of providing state-of-the-art automation solutions in the injection moulding industry.

For more information about PCM Automation and its services, please contact Roger Ewers on 01924 485553 or roger.ewers@pcm-automation.com.

About PCM Automation:

PC Moulding & Automation we specialise in the automation of injection moulding. Our past work ranges from the full design and implementation of an entire automation cell using 6 axis robots, to a much smaller, mobile laser degating station.

The company was formed in 2009 by Peter Crossley, who recognised a market for automation within the plastics moulding sector. The following years saw sales grow quickly, and therefore so did the company's team and facility. In 2012 they moved into their first business unit in Dewsbury, which was a modest 500 Sq ft, but crucially, this allowed them to buy CNC machining equipment in order to manufacture parts in house.

This was achieved by the acquisition of Delta Engineering, which brought milling, turning, welding & fabrication capabilities to the company.

The next few years saw healthy growth in the business, which allowed PCM Automation to increase their workforce, initially with an extra service engineer and mechanical engineer in the toolroom, but that soon became a CAD engineer as the company invested in Solidworks to support the ever-growing enquiry list for automation integration.

In 2019, they moved for the second time in three years to Trinity Business Park in Wakefield, a 7700 sq. ft. building, which is a perfect location to allow PCM Automation to carry out the next stage of their business plan.
